

Science Progression of Skills

Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
ASKING QUESTIONS AND CARRYING OUT FAIR AND COMPARATIVE TESTS					
<ul style="list-style-type: none"> • explore the world around them, leading them to ask some simple scientific questions about how and why things happen. • begin to recognise ways in which they might answer scientific questions. • ask people questions and use simple secondary sources to find answers. • carry out simple practical tests, using simple equipment. • experience different types of scientific enquiries, including practical activities. • talk about the aim of scientific tests they are working on. 	<ul style="list-style-type: none"> • explore the world around them, leading them to ask some simple scientific questions about how and why things happen. • begin to recognise ways in which they might answer scientific questions. • ask people questions and use simple secondary sources to find answers. • carry out simple practical tests, using simple equipment. • experience different types of scientific enquiries, including practical activities. • talk about the aim of scientific tests they are working on. 	<ul style="list-style-type: none"> • start to raise their own relevant questions about the world around them in response to a range of scientific experiences. • start to make their own decisions about the most appropriate type of scientific enquiry they might use to answer questions. • recognise when a fair test is necessary. • help decide how to set up a fair test, making decisions about what observations to make, how long to make them for and the type of simple equipment that might be used. • set up and carry out simple comparative and fair tests. 	<ul style="list-style-type: none"> • start to raise their own relevant questions about the world around them in response to a range of scientific experiences. • start to make their own decisions about the most appropriate type of scientific enquiry they might use to answer questions. • recognise when a fair test is necessary. • help decide how to set up a fair test, making decisions about what observations to make, how long to make them for and the type of simple equipment that might be used. • set up and carry out simple comparative and fair tests. 	<ul style="list-style-type: none"> • with growing independence, raise their own relevant questions about the world around them in response to a range of scientific experiences. • with increasing independence, make their own decisions about the most appropriate type of scientific enquiry they might use to answer questions. • explore and talk about their ideas, raising different kinds of scientific questions. • ask their own questions about scientific phenomena. • select and plan the most appropriate type of scientific enquiry to use to answer scientific questions. • make their own decisions about what observations to make, what measurements to use and how long to make them for, and whether to repeat them. • plan, set up and carry out comparative and fair tests to answer questions, including recognising and controlling variables where necessary. • use their test results to identify when further tests and observations may be needed. • use test results to make predictions for further tests. 	<ul style="list-style-type: none"> • with growing independence, raise their own relevant questions about the world around them in response to a range of scientific experiences. • with increasing independence, make their own decisions about the most appropriate type of scientific enquiry they might use to answer questions. • explore and talk about their ideas, raising different kinds of scientific questions. • ask their own questions about scientific phenomena. • select and plan the most appropriate type of scientific enquiry to use to answer scientific questions. • make their own decisions about what observations to make, what measurements to use and how long to make them for, and whether to repeat them. • plan, set up and carry out comparative and fair tests to answer questions, including recognising and controlling variables where necessary. • use their test results to identify when further tests and observations may be needed. • use test results to make predictions for further tests.

Science Progression of Skills

OBSERVING AND MEASURING CHANGES

<ul style="list-style-type: none"> observe the natural and humanly constructed world around them. observe changes over time. use simple measurements and equipment. make careful observations, sometimes using equipment to help them observe carefully. 	<ul style="list-style-type: none"> observe the natural and humanly constructed world around them. observe changes over time. use simple measurements and equipment. make careful observations, sometimes using equipment to help them observe carefully. 	<ul style="list-style-type: none"> make systematic and careful observations. observe changes over time. use a range of equipment, including thermometers and data loggers. ask their own questions about what they observe. where appropriate, take accurate measurements using standard units using a range of equipment. 	<ul style="list-style-type: none"> make systematic and careful observations. observe changes over time. use a range of equipment, including thermometers and data loggers. ask their own questions about what they observe. where appropriate, take accurate measurements using standard units using a range of equipment. 	<ul style="list-style-type: none"> choose the most appropriate equipment to make measurements and explain how to use it accurately. take measurements using a range of scientific equipment with increasing accuracy and precision. make careful and focused observations. know the importance of taking repeat readings and take repeat readings where appropriate. 	<ul style="list-style-type: none"> choose the most appropriate equipment to make measurements and explain how to use it accurately. take measurements using a range of scientific equipment with increasing accuracy and precision. make careful and focused observations. know the importance of taking repeat readings and take repeat readings where appropriate.

Science Progression of Skills

<ul style="list-style-type: none"> • identify and discuss differences between their results. • use simple and scientific language. • read and spell scientific vocabulary at a level consistent with their increasing word reading and spelling knowledge at key stage 1. • talk about their findings to a variety of audiences in a variety of ways. 	<ul style="list-style-type: none"> • identify and discuss differences between their results. • use simple and scientific language. • read and spell scientific vocabulary at a level consistent with their increasing word reading and spelling knowledge at key stage 1. • talk about their findings to a variety of audiences in a variety of ways. 	<ul style="list-style-type: none"> • first talk about, and then go on to write about, what they have found out. • report and present their results and conclusions to others in written and oral forms with increasing confidence. 	<ul style="list-style-type: none"> • first talk about, and then go on to write about, what they have found out. • report and present their results and conclusions to others in written and oral forms with increasing confidence. 	<ul style="list-style-type: none"> • read, spell and pronounce scientific vocabulary correctly. • identify patterns that might be found in the natural environment. • look for different causal relationships in their data. • discuss the degree of trust they can have in a set of results. • independently report and present their conclusions to others in oral and written forms. 	<ul style="list-style-type: none"> • read, spell and pronounce scientific vocabulary correctly. • identify patterns that might be found in the natural environment. • look for different causal relationships in their data. • discuss the degree of trust they can have in a set of results. • independently report and present their conclusions to others in oral and written forms.
USING SCIENTIFIC EVIDENCE AND SECONDARY SOURCES OF INFORMATION					
		<ul style="list-style-type: none"> • make links between their own science results and other scientific evidence. • use straightforward scientific evidence to answer questions or support their findings. • identify similarities, differences, patterns and changes relating to simple scientific ideas and processes. • recognise when and how secondary sources might help them to answer questions that cannot be answered through practical investigations. 	<ul style="list-style-type: none"> • make links between their own science results and other scientific evidence. • use straightforward scientific evidence to answer questions or support their findings. • identify similarities, differences, patterns and changes relating to simple scientific ideas and processes. • recognise when and how secondary sources might help them to answer questions that cannot be answered through practical investigations. 	<ul style="list-style-type: none"> • use primary and secondary sources evidence to justify ideas. • identify evidence that refutes or supports their ideas. • recognise where secondary sources will be most useful to research ideas and begin to separate opinion from fact. • use relevant scientific language and illustrations to discuss, communicate and justify their scientific ideas. • talk about how scientific ideas have developed over time. 	<ul style="list-style-type: none"> • use primary and secondary sources evidence to justify ideas. • identify evidence that refutes or supports their ideas. • recognise where secondary sources will be most useful to research ideas and begin to separate opinion from fact. • use relevant scientific language and illustrations to discuss, communicate and justify their scientific ideas. • talk about how scientific ideas have developed over time.
